

Welcome to

Green Wallet

**@GigaHierz
@iamsamcodes
@v1rv5k
@NenaRapsody
@ZoeZ_Fleischer**

**→ An ecofriendly, chain-agnostic wallet that
accounts for your blockchain transactions
by offsetting your carbon footprint.**

What is the problem?

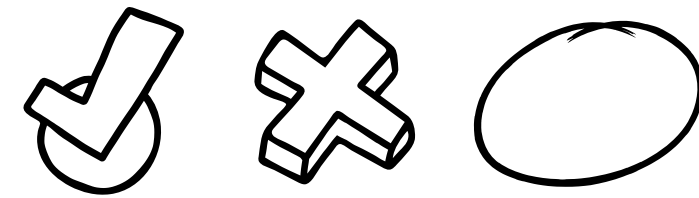

**climate
change!!!**

**we have to hold
bigger companies
accountable**

accessibility

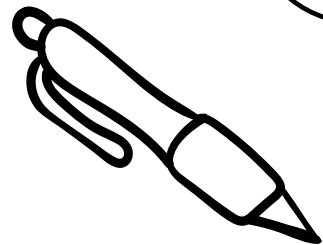

How are we solving it

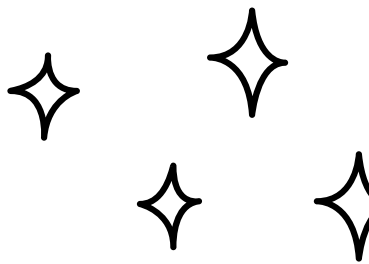

1

Creating awareness for climate positive projects

2

Creating a climate positive app

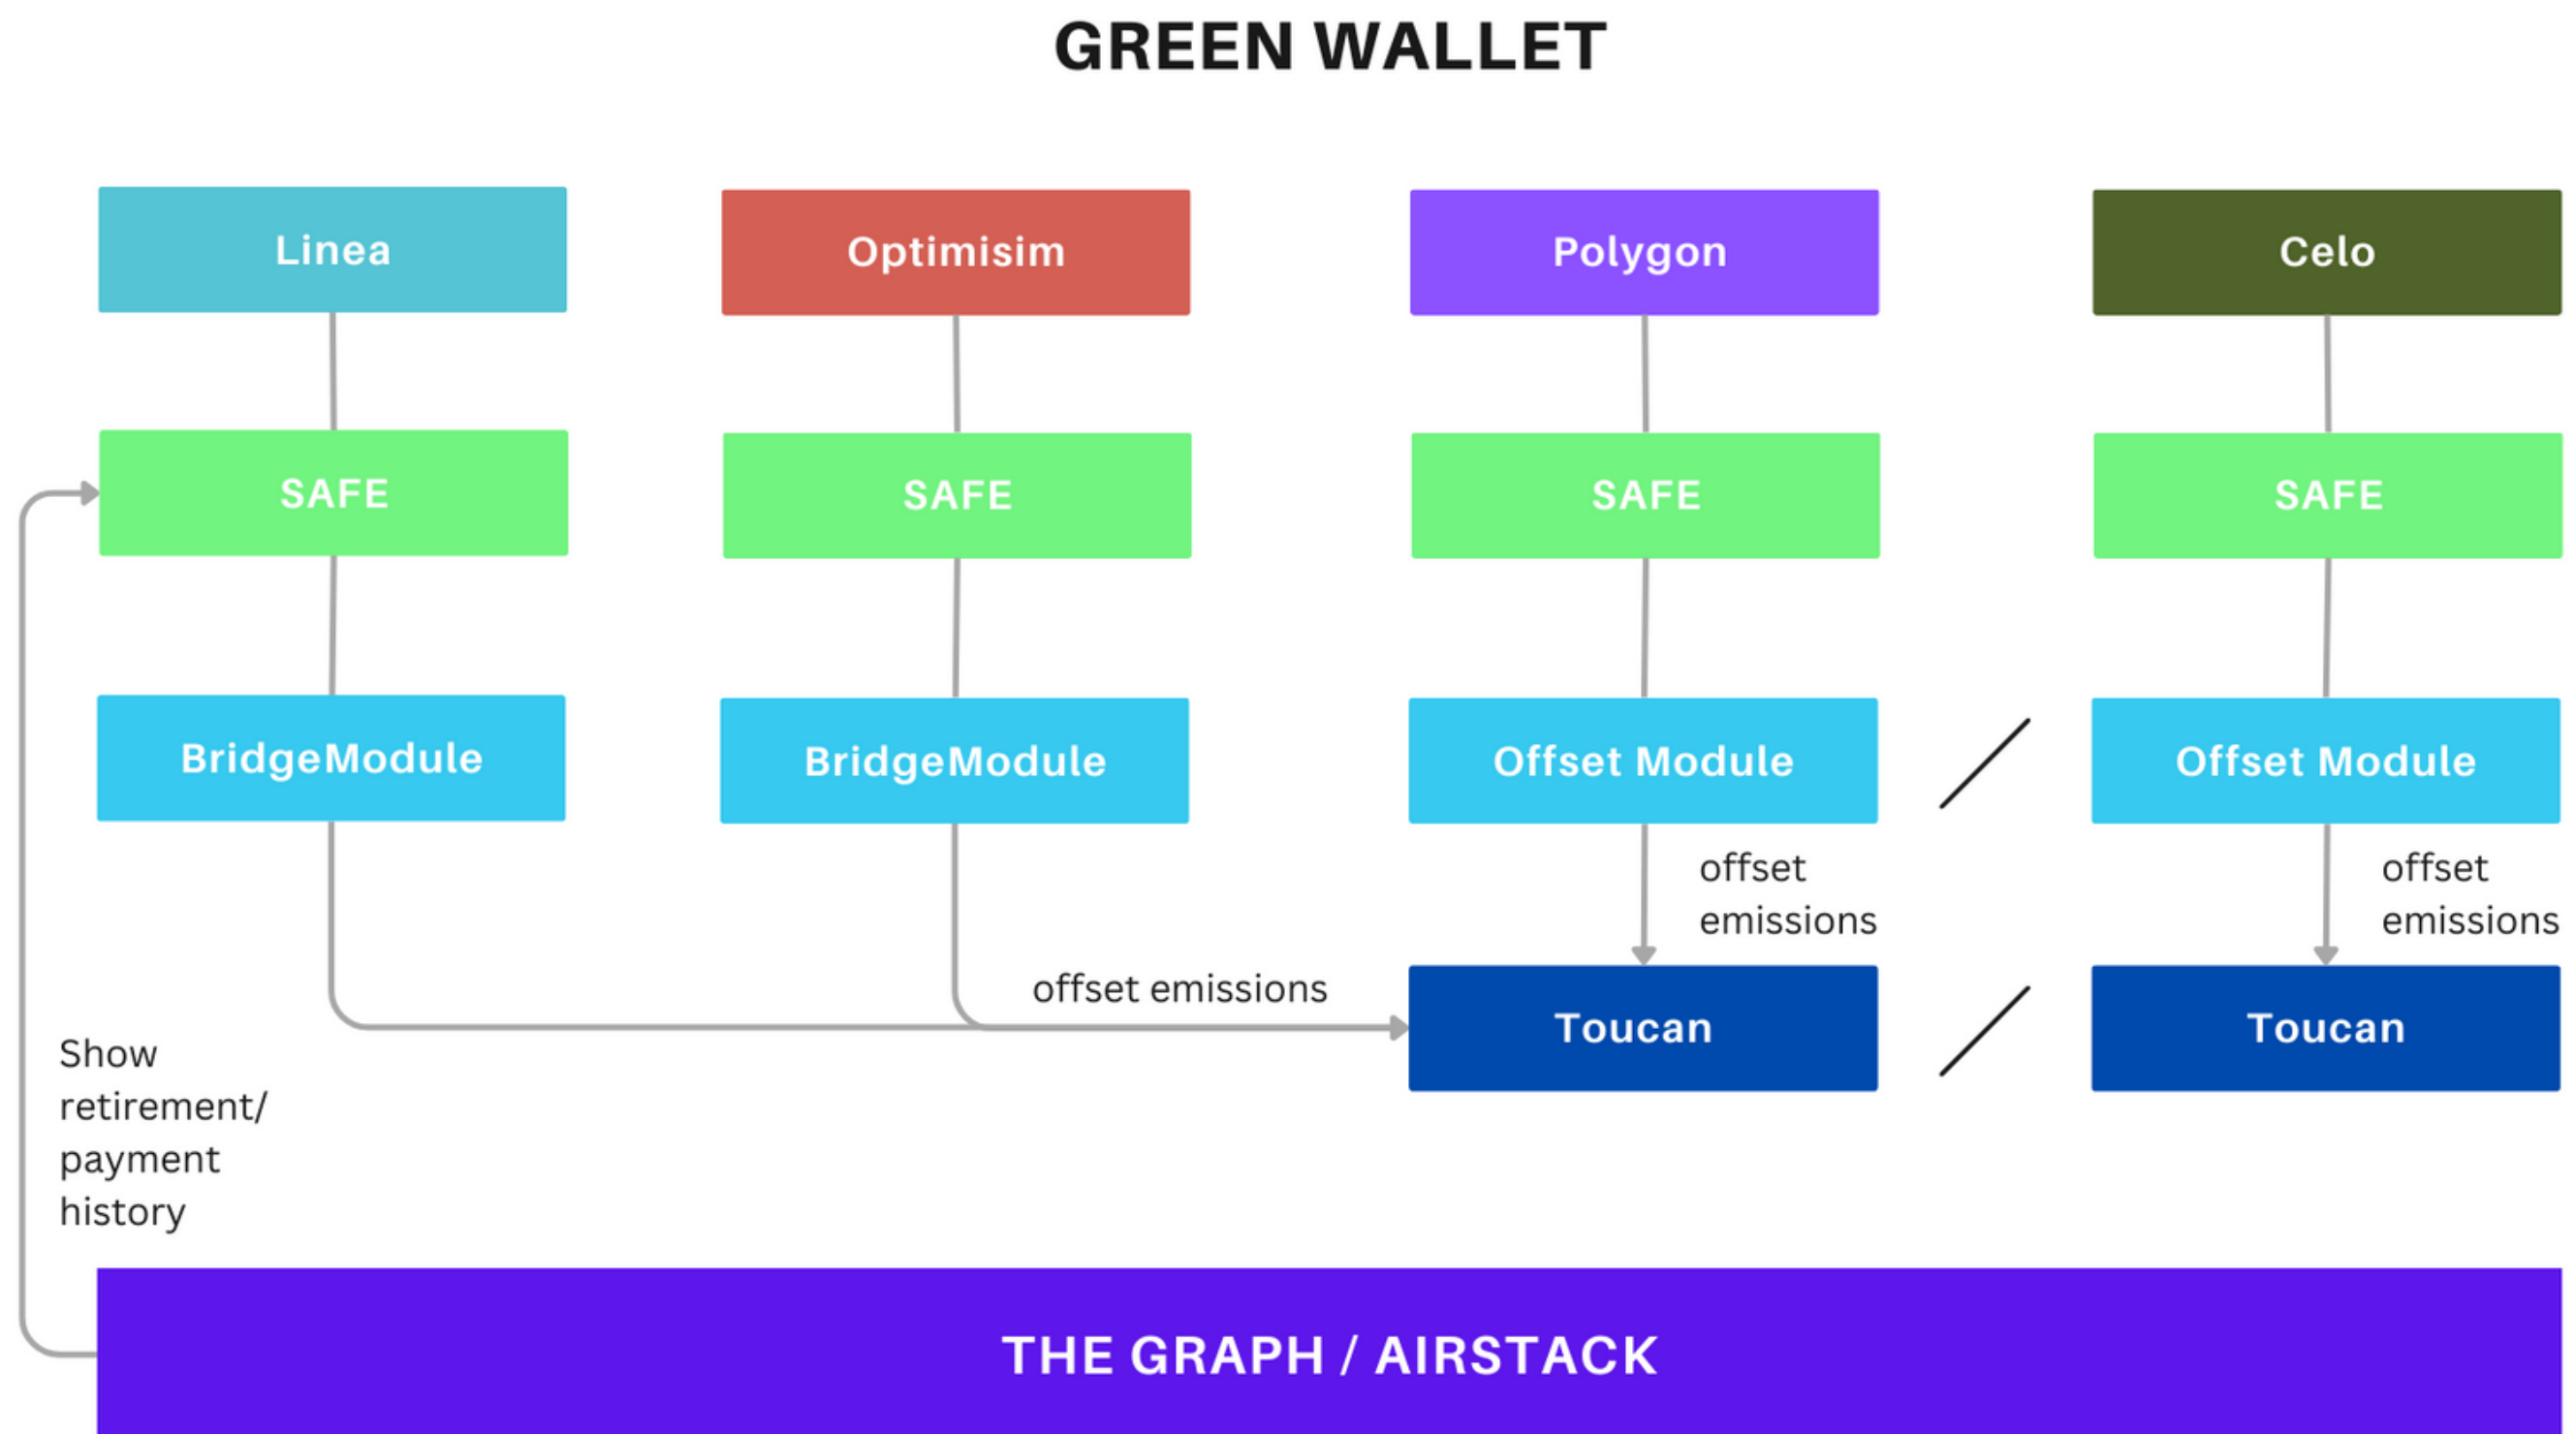

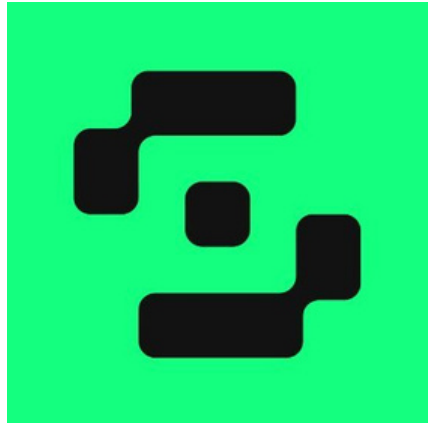

How it works?

1 Create a new Safe wallet

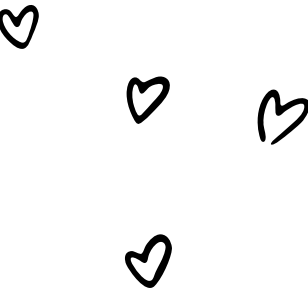

2 Every 500 txs/ end of the month we will automatically retire carbon credits to account for the emission of your transaction

3 No gas fees for that ;)

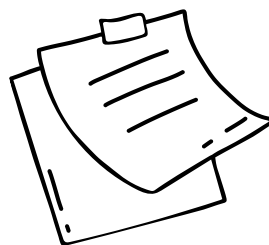

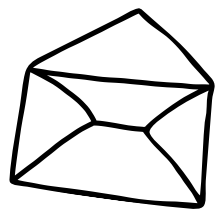

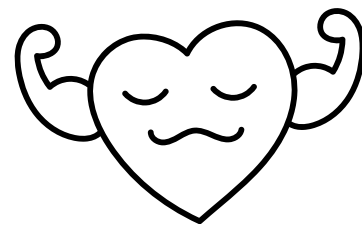

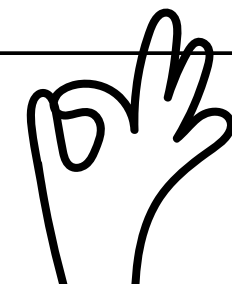

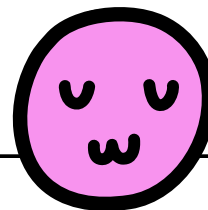

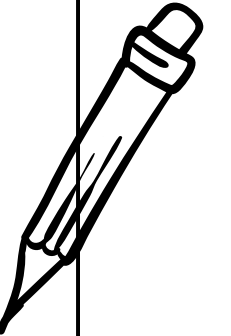

TechStack

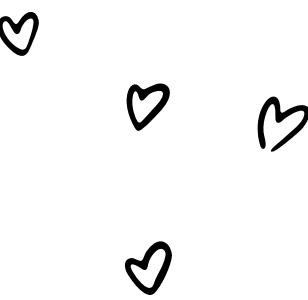

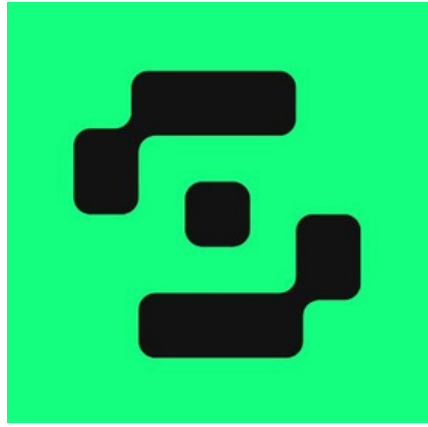

Lets get technical!

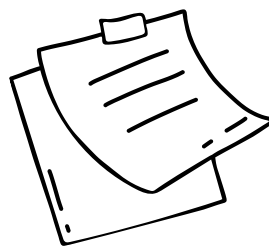

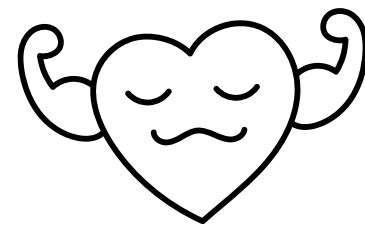

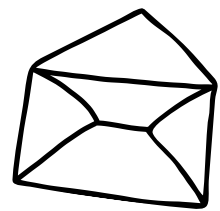

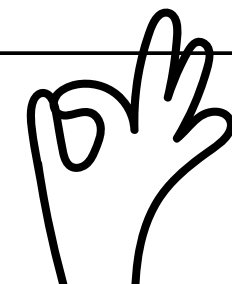

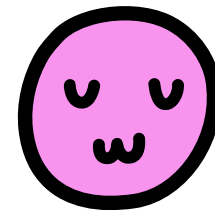

- Node.js
- JavaScript
- TypeScript
- Wagmi
- Bootstrap Tailwind
- React.js
- Safe
- Solidity
- Gelato
- The Graph
- GraphQL
- Toucan SDK
- Chainlink

Bounties

- Safe
- Polygon
- Optimism

Features to add

- Calculate exact amount of emissions, using concepts like e.g. Offsetra
- Use lens to sign in
- More options to choose from to offset
- Deploy on Celo as base chain as it is already carbon neutral
- Add to lens, how many green wallets you are pat of
- way to incentivise the use

That's a wrap!

WAGMI!!!
